The SUSE® Product Portfolio

SUSE, a pioneer in open source software, provides software-defined infrastructure, management and application delivery solutions that give enterprises greater control and flexibility. With more than 25 years of engineering excellence, exceptional service and a worldwide partner ecosystem, SUSE provides the products and support you need to manage complexity, reduce costs and confidently deliver mission-critical services. Our comprehensive set of solutions helps you adapt to changing market conditions and delivers the agility and innovation you need to succeed. Here is a complete list of SUSE® products available today.

**Application Delivery Solutions**

**SUSE CaaS Platform**
SUSE CaaS Platform is an enterprise-class container management solution powered by Kubernetes technology that enables IT and DevOps professionals to more easily deploy, manage and scale container-based applications and services. Enterprises use SUSE CaaS Platform to reduce application delivery cycle times and improve their business agility. Learn more at: [www.suse.com/caas](http://www.suse.com/caas)

**SUSE Cloud Application Platform**
A modern application delivery platform, SUSE Cloud Application Platform is used by software development and operations teams to streamline lifecycle management of traditional and new cloud-native applications. Bringing together industry-leading Cloud Foundry and Kubernetes technologies, the platform facilitates DevOps process integration across multiple application delivery models to accelerate innovation, improve IT responsiveness and maximize return on investment. Learn more at: [www.suse.com/cloud-application-platform](http://www.suse.com/cloud-application-platform)

**Software-Defined Infrastructure Solutions**

**SUSE OpenStack Cloud**
Built for today’s enterprises, SUSE OpenStack Cloud is an automated cloud computing platform that enables IT organizations to rapidly deploy and easily manage Infrastructure-as-a-Service clouds. Combining the technical power and innovation of the OpenStack project with the excellence of SUSE engineering and support, SUSE OpenStack Cloud enables enterprises to improve resource utilization and speed the delivery of IT services across a secure, compliant and fully supported cloud environment. Learn more at: [www.suse.com/cloud](http://www.suse.com/cloud)

**SUSE OpenStack Cloud Monitoring**
Based on the OpenStack Monasca project, SUSE OpenStack Cloud Monitoring is a fully scalable, enterprise-grade solution that makes it simple to monitor and manage your OpenStack cloud environments and workloads. Identify problems early, avoid downtime and reduce costs with a solution that automates cloud monitoring and management tasks while helping you to analyze the health and performance of your OpenStack infrastructure and user workloads. Learn more at: [www.suse.com/products/suse-openstack-cloud/openstack-cloud-monitoring/](http://www.suse.com/products/suse-openstack-cloud/openstack-cloud-monitoring/)

**SUSE Enterprise Storage™**
SUSE Enterprise Storage, powered by Ceph, is a highly scalable and resilient software-based storage solution that enables you to build cost-efficient and highly scalable storage using commodity off-the-shelf servers and disk drives. It is a self-healing and self-managing solution that delivers storage functionality comparable to mid- and high-end storage products at a fraction of the cost. It also scales from a terabyte to a multi-petabyte storage network. Learn more at: [www.suse.com/storage](http://www.suse.com/storage)
SUSE Linux Enterprise Server
SUSE Linux Enterprise Server is a world-class, secure open source server operating system, built to power physical, virtual and cloud-based mission-critical workloads. Designed for mixed IT environments, it offers best-of-breed performance with reduced risk of technological obsolescence or vendor lock-in. Learn more at: www.suse.com/server

SUSE Linux Enterprise Server for ARM
With SUSE Linux Enterprise Server for ARM, solution providers and enterprise early adopters can exploit unique 64-bit Arm capabilities on a well-established open source platform. This enterprise-grade Linux distribution includes advanced tools that improve time to market and enables innovation with support for a broad set of ArmV8-A processors. Learn more at: www.suse.com/products/arm

SUSE Linux Enterprise Server for POWER
SUSE Linux Enterprise Server for POWER delivers an enterprise-grade Linux distribution optimized for IBM Power Systems. You can increase reliability and reduce costs for mission-critical applications, meet business requirements for high performance and accelerate innovation with reduced deployment times. Learn more at: www.suse.com/power

SUSE Linux Enterprise Server for z Systems and LinuxONE
This enterprise-class, highly reliable, scalable and secure open source server operating system is optimized for IBM z Systems and LinuxONE and built to power physical, virtual and cloud-based mission-critical workloads. Combining the resiliency of the mainframe, the power of SUSE Linux Enterprise Server and advanced hypervisor capabilities, it enables your organization to consolidate servers and create virtual environments that accelerate innovation, boost performance and throughput, and improve operational efficiency. Learn more at: www.suse.com/products/systemz

SUSE Linux Enterprise Server for SAP Applications
SUSE Linux Enterprise Server for SAP Applications is the leading platform for SAP NetWeaver and SAP HANA solutions. It delivers optimized performance, reduced downtime and faster SAP system deployments, including features that ease the transition to SAP S/4HANA on Linux. Learn more at: www.suse.com/products/sles-for-sap
SUSE Linux Enterprise Server for High Performance Computing
This highly scalable, high performance open source operating system is designed to utilize the power of parallel computing for modeling, simulation and advanced analytics applications. It accelerates innovation with a strong ecosystem of partners, improves scalability and performance by utilizing the power of parallel computing, and increases efficiency with an offering that runs on a broad range of hardware with enhanced management of HPC workloads. Learn more at: www.suse.com/products/server/hpc

SUSE Linux Enterprise Live Patching
SUSE Linux Enterprise Live Patching is a cutting-edge technology that improves business continuity and saves costs by reducing downtime, increasing service availability and enhancing security & compliance. SUSE Linux Enterprise Live Patching offers a proactive and dynamic approach to kernel maintenance that saves your company valuable time and money by never needing to stop the kernel to apply kernel patches. Learn more at: www.suse.com/products/live-patching

SUSE Linux Enterprise Real Time
This enterprise-class, open source Real Time Operating System built on SUSE Linux Enterprise is designed to reduce latency and increase the predictability and reliability of time-sensitive, business-critical applications. It strengthens the reliability of business-critical workloads with process and task prioritization, reduces latency while maximizing application performance through virtualization, and increases the predictability of critical business process response times through a real-time scheduler. Learn more at: www.suse.com/products/realtime

SUSE Linux Enterprise High Availability Extension
This industry-leading open source high availability clustering system is designed to virtually eliminate unplanned downtime for business-critical workloads. It is easy to use and can be deployed in both physical and virtual environments. It saves time with easy server cluster management, boosts flexibility while improving service availability and resource utilization, and reduces data loss by protecting your data assets. Learn more at: www.suse.com/products/highavailability

Geo Clustering for SUSE Linux Enterprise High Availability Extension
This open source high availability system is designed to manage cluster servers in data centers anywhere in the world, with maximum protection for business-critical workloads that can never have unplanned downtime. It protects workloads across globally distributed data centers with automatic workload transfer, saves applications from regional disasters with rules-based failover, and ensures compliance. Learn more at: www.suse.com/products/highavailability/geo-clustering

SUSE Linux Enterprise Workstation Extension
Save time and improve code quality with SUSE Linux Enterprise Workstation Extension. Turn SUSE Linux Enterprise Server into a fully-featured development or administrator workstation environment with this workstation extension from SUSE. Learn more at: www.suse.com/products/workstation-extension

SUSE Linux Enterprise Server with Expanded Support
SUSE Linux Enterprise Server with Expanded Support is a premier support subscription that includes support, patches and updates for other existing Linux platforms, such as Red Hat. Customers benefit from a single point of contact for servicing and supporting their heterogeneous Linux environment, and can more easily standardize their IT environment in preparation for their journey to the cloud. Learn more at: www.suse.com/expandedsupport

Long Term Service Pack Support
Long Term Service Pack Support is a service option that enables your enterprise to extend the lifecycle of each major version of SUSE Linux Enterprise Server by delivering up to 5 years of support on a service pack and 13 years on a major release. With this option, organizations balancing the need for data center optimization with the costs and risks of integrating system upgrades can take advantage of our latest technology at a pace that makes sense for their business. Learn more at: www.suse.com/products/long-term-service-pack-support/

SUSE Linux Enterprise Virtual Machine Driver Pack
SUSE Linux Enterprise Virtual Machine Driver Pack is a bundle of para-virtualized network, bus and balloon drivers that enable you to run fully virtualized Windows workloads on SUSE Linux Enterprise Server with near-native performance. Learn more at: www.suse.com/products/vmdriverpack
SUSE Studio™
Powered by the Open Build Service, SUSE Studio is the ideal tool to quickly and easily create, deploy and maintain portable, customized Linux application images or packages for physical, virtual or cloud-based deployments. Save time, effort and costs by automating and simplifying your software deployments with this powerful, collaborative and easy to use tool. SUSE Studio also helps maximize reliability and security by enabling you to create and maintain up to date, fully tested Linux applications that include the latest software versions and patches. Learn more at: www.suse.com/susestudio

SUSE Linux Enterprise Desktop
SUSE Linux Enterprise Desktop delivers a desktop computing platform with proven security. It is an enterprise grade desktop that is fun to use, cost-effective, and designed for mixed IT environments. The desktop comes bundled with dozens of leading applications, including a high-powered office suite, a secure web browser, email, collaboration tools, and multimedia players. Learn more at: www.suse.com/desktop

Infrastructure & Lifecycle Management Solutions

SUSE Manager
Built for Linux, SUSE Manager delivers a best-in-class open source IT infrastructure management solution for your software-defined infrastructure. It is designed to help your enterprise DevOps and IT Operations teams reduce complexity and regain control of IT assets by enabling comprehensive management of your Linux systems, VMs and containers with a single, centralized solution. SUSE Manager provides automated and cost-effective management, provisioning, orchestration and monitoring, so you can easily manage and maintain your enterprise Linux system deployments across physical, virtual and cloud environments. Learn more at: www.suse.com/products/suse-manager

SUSE Manager for Retail
This industry-leading open source infrastructure management solution is optimized and tailored specifically for the retail industry, providing a reliable, flexible and open platform for managing point of service devices. It optimizes operations while reducing costs across your retail environment, ensuring compliance and security and increasing the flexibility, reliability and uptime of your point-of-service devices. Learn more at: www.suse.com/products/suse-manager-retail
