Do you need to achieve ScaleOut and high availability for your SAP HANA deployments?

SUSE Linux Enterprise High Availability Extension and SUSE Linux Enterprise Server for SAP Applications are built on leading open source clustering components—the ideal platform for running business critical workloads that also require high availability. This SUSE Assist: Deployment Services offering provides the mechanism for building out a clustered high availability environment so that your SAP HANA solutions will remain available during both planned and unplanned downtime.

This targeted and impactful fixed-cost, packaged offering brings to you the capabilities and business benefits of this solution—offering enterprise-class high availability clustering for your database and SAP workloads.

Engagement Overview

Solution experts from SUSE Global Services will work with you and your team to deploy one highly-available SAP HANA ScaleOut instance. We will also define and execute one test plan for this instance.

To fully optimize this services engagement, you should have already deployed SUSE Linux Enterprise Server for SAP Applications. This engagement is meant to expand or upgrade that environment. This solution can run on a number of

platforms -- including hardware, virtualized environments and some cloud solutions.

After we work with your team to complete the onsite work, we will deliver tailored summary documentation that captures deployment details, best practice guidance, and suggested next steps.

Target Participants

To be effective, our team should work with your organization's Linux administrator during this engagement—whether they are new to Linux or have established Linux experience. A Linux certification is a plus, but not necessary.

Benefits

Realize high availability for your SAP applications in record time. Engaging in a SUSE Assist: Deployment Service for SAP HANA High Availability ScaleOut will give your team confidence in their implementation. This service offering includes:

- A well-structured engagement using a tried-and-tested approach
- The opportunity for hands-on skills transfer
- The benefit of gaining best-practice guidance from our team of experts

“The strong partnership between SUSE and SAP, the history of HANA on the SUSE OS, and the high market share of this platform among SAP users all convinced us that choosing SUSE Enterprise Linux Server was a no-brainer.”
