

SUSE Start for SUSE CaaS Platform

SUSE® Start provides a fast path for a stress-free implementation and configuration of select SUSE solutions. With SUSE Start for SUSE CaaS Platform, customers can quickly and easily see how they can run SAP Data Hub on our Kubernetes infrastructure. Just as SUSE CaaS Platform brings container management to the enterprise, SAP Data Hub offers a data orchestration platform that provides integration, and channels and manages information for all of your data sources. Together, they provide a complete solution to unlock the value of your collected business data.

SUSE Start at a Glance:

- Short-term, fixed-priced offering that provides rapid implementation and deployment of select SUSE products. SUSE Start for CaaS Platform includes:

- + Expert design advice and considerations to review the product features and design considerations.
- + Setup and implementation of SUSE CaaS Platform and SUSE Enterprise Storage using best practices, which will provide the SUSE infrastructure required for SAP Data Hub.
- + Rapid deployment of SAP Data Hub on top of the SUSE infrastructure.

- The output of a SUSE Start for CaaS Platform engagement is rapid implementation of the SUSE infrastructure needed to support your SAP Data Hub deployment.

Products:

- + SUSE Start Services
- + SUSE CaaS Platform
- + SUSE Enterprise Storage

SUSE Start for SUSE CaaS Platform

SUSE Start provides a fast path for a rapid and stress-free implementation and configuration of select SUSE® solutions. With SUSE Start for SUSE CaaS Platform, you can fast track implementing a solid foundation for SAP Data Hub. SAP Data Hub is the data orchestration platform that enables management and governance of data across your enterprise.

The combination of SUSE CaaS Platform with SUSE Enterprise Storage provide the infrastructure you need to support your SAP Data Hub deployment. With this solid foundation in place, you will be able to quickly deploy SAP Data Hub and build applications that can derive insights from all of your data, regardless of the type. Ultimately, unlocking the value from the plethora of data your business is collecting.

Data is Growing

The volume of data collected today is growing faster than ever before. In fact, the research firm, IDC, estimates that by

the year 2025 there will be more than 175 zettabytes of data worldwide. This represents an astounding 61 percent compounded annual growth rate.

With much of that data being unstructured, coming from sources such as the Internet of Things, social sites and multimedia, companies are struggling with how to access the value the data holds. SAP Data Hub is your key to unlocking this data treasure.

With its fully containerized architecture, SAP Data Hub is an all in one data orchestration solution. It provides orchestration and governance on any type and volume of data across the entire distributed data landscape. Data Hub is SAP's big data visualization and management tool, allowing users to see data from across their company's entire data landscape, pulling it from sources like Hadoop, Amazon S3, Google GCS, Azure ADL and relational databases, and enterprise applications like SAP S/4HANA and SAP BW/4HANA. The comprehensive view SAP Data Hub creates helps users understand the data, see

The combination of SUSE infrastructure with SAP Data Hub quickly unlocks value from the plethora of data your business collects.

the opportunities the data presents and get the data to the teams that can leverage it the most.

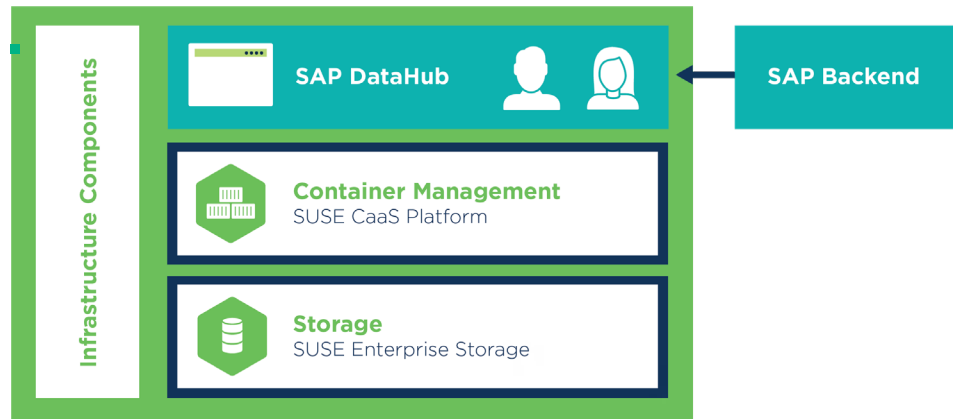

Run SAP Data Hub on the same operating system and container solution running your HANA environment, which is SUSE CaaS Platform. A validated solution for SAP Data Hub, SUSE CaaS Platform enable multi-cloud deployments with hyper cloud independent Kubernetes solutions.

Implement SUSE Enterprise Storage, an intelligent software-defined storage solution, which can scale from hundreds of terabytes to petabytes and beyond. Deliver a unified and highly scalable storage solution that is cost-efficient and seamlessly adapts to changing business and data demands.

Unlock the Value with SUSE Start for SUSE CaaS Platform

SUSE Start is your key to quickly implementing the SUSE infrastructure to support SAP Data Hub. Choosing SUSE Start for SUSE CaaS Platform enables our product and technical experts to work with your team to:

- Review the product features and general design considerations to understand your overall desired business outcomes.

- Understand the necessary SUSE technologies and architecture needed to support SAP Data Hub.
- Install and configure SUSE CaaS Platform using our best practices.
- Optionally, install and configure SUSE Enterprise Storage to provide a highly scalable and resilient storage solution.
- Implement SAP Data Hub so that you have confidence that your new SUSE infrastructure supports your desired business outcomes.

By relying on experienced consultants that are product experts, you will see a fast and flexible turnaround with minimal disruption to your business. During the SUSE

Start project, your SUSE consulting team will work to transition the operation and support to your own IT staff.

Quickly realize the value of the right technology, implemented by the right people, at the right time. Fuel your digital business with a SUSE Start for SUSE CaaS Platform.
